

Senior software engineering for applications that need to work - not just ship.

FADLtech helps organizations modernize aging software, automate operational workflows with AI, and build business-critical applications.

Work directly with an experienced software architect and developer - from technical strategy through production delivery.

Three focused ways to start

LEGACY MODERNIZATION

Before you rewrite, find out what actually needs to change.

Legacy Application Modernization Assessment

~2 weeks

From \$9,500

- Current-state architecture and technical-debt assessment
- Prioritized modernization options and risks
- Phased roadmap and executive readout

[View offer ->](#)

AI WORKFLOW AUTOMATION

Before you launch an AI initiative, prove one useful workflow.

AI Workflow Automation Assessment & Pilot

2-3 weeks

From \$12,500

- Workflow and automation opportunity analysis
- Working pilot using realistic inputs
- Production roadmap and go / no-go decision

[View offer ->](#)

CUSTOM APPLICATIONS

Before you start building, make sure you are building the right system.

Discovery & Architecture Sprint

1-2 weeks

From \$7,500

- Prioritized requirements and solution architecture
- Data, integration, and MVP definition
- Phased implementation plan and estimate

Proof of senior engineering judgment

\$6M

licensing cost avoided

SEC enterprise search modernization helped retire a commercial product one year early.

80%

support backlog reduction

USCIS legacy modernization reduced the average ticket backlog from about 250 to 50 within six months.

GOBFRAIN

FADLtech product build

End-to-end production application: UX, AWS architecture, AI orchestration, billing, security, and operations.

Why FADLtech

DIRECT SENIOR INVOLVEMENT

The person defining the solution is involved in delivering it - no sales-to-junior-team handoff.

ARCHITECTURE BEFORE ACTIVITY

Focus first on the business problem, constraints, risks, and smallest useful path forward.

BUILT TO BE OWNED

Maintainable code, testing, documentation, repeatable deployment, and an architecture another engineer can understand.

Omar Fadl

20+ years enterprise software | 12+ years Microsoft Consulting Services | AWS Certified

Senior software architect & developer

Have a software problem you are trying to figure out?

Start with a 30-minute conversation. No finished specification required and no obligation to start a project.
